

GED Math Practice Test 17

PART A — QUESTIONS

GED-MATH17-001

Section: Math

Type: mcq

Category: Quantitative Problem Solving

Calculator: Non-Calculator

Prompt:

A warehouse had 112 safety vests. Workers placed 6 racks with 13 vests on each rack. How many safety vests were not placed on those racks?

- A) 26
- B) 34
- C) 48
- D) 78

GED-MATH17-002

Section: Math

Type: mcq

Category: Algebraic Problem Solving

Calculator: Non-Calculator

Prompt:

What is the value of $4x^2 - 6x + 1$ when $x = 3$?

- A) 13
- B) 19
- C) 25
- D) 31

GED-MATH17-003

Section: Math

Type: mcq

Category: Quantitative Problem Solving

Calculator: Non-Calculator

Prompt:

A compost bin was $\frac{2}{5}$ full. A worker added $\frac{3}{10}$ of the bin's capacity and then removed $\frac{1}{4}$ of the bin's capacity. What fraction of the bin was full after these changes?

- A) $\frac{7}{20}$
- B) $\frac{9}{20}$
- C) $\frac{11}{20}$
- D) $\frac{13}{20}$

GED-MATH17-004

Section: Math

Type: mcq

Category: Algebraic Problem Solving

Calculator: Non-Calculator

Prompt:

Which expression is equivalent to $-4(3p - 2) + 5(2p + 7)$?

- A) $-2p + 43$
- B) $-2p - 27$

- C) $-22p + 43$
D) $22p - 27$

GED-MATH17-005

Section: Math

Type: mcq

Category: Quantitative Problem Solving

Calculator: Non-Calculator

Prompt:

A training session had 45 seats. If 27 seats were filled, what percent of the seats were filled?

- A) 45%
B) 54%
C) 60%
D) 72%

GED-MATH17-006

Section: Math

Type: mcq

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

The formula $A = (m + 7)^2 - 9$ is used in a design calculation. If $A = 135$, what is one possible value of m ?

- A) 5
B) 8
C) 12
D) 19

GED-MATH17-007

Section: Math

Type: numeric_entry

Category: Quantitative Problem Solving

Calculator: Calculator-Allowed

Prompt:

A catering order includes 18 trays. Each tray has 16 cups, and each cup holds 6.5 ounces. How many total ounces are in the order?

Type your answer as an integer.

GED-MATH17-008

Section: Math

Type: dropdown

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

The formula $F = kx + b$ can be used to model a linear relationship. To solve for x , first subtract [D1] from both sides, then divide by [D2].

Dropdowns:

- D1) b | k | x
D2) b | k | F

GED-MATH17-009

Section: Math

Type: mcq

Category: Quantitative Problem Solving

Calculator: Calculator-Allowed

Prompt:

A bus depot had 780 gallons of fuel at the start of the week. It received a delivery of 240 gallons and then used 395 gallons. What percent of the starting fuel amount remained after these changes?

- A) 49.4%
- B) 62.5%
- C) 80.1%
- D) 130.8%

GED-MATH17-010

Section: Math

Type: mcq

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

Which statement describes all possible values of y if $4(3y - 2) + 5 \geq 69$?

- A) $y \geq 5$
- B) $y \geq 6$
- C) $y \leq 5$
- D) $y \leq 6$

GED-MATH17-011

Section: Math

Type: mcq

Category: Quantitative Problem Solving

Calculator: Calculator-Allowed

Prompt:

The table shows miles driven and fuel used by three delivery cars.

Car: A, B, C

Miles driven: 198, 238, 270

Gallons used: 9, 14, 15

Which car had the greatest fuel efficiency?

- A) Car A
- B) Car B
- C) Car C
- D) Cars B and C were tied

GED-MATH17-012

Section: Math

Type: multi_select

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

Select TWO answers.

Which expressions are equivalent to $9(2x - 5) - 4(3x + 1)$?

- A) $6x - 49$
- B) $18x - 45 - 12x - 4$
- C) $6x - 41$
- D) $9(2x) - 9(5) - 4(3x) - 4$
- E) $5(6x - 9)$

GED-MATH17-013

Section: Math

Type: mcq

Category: Quantitative Problem Solving

Calculator: Calculator-Allowed

Prompt:

A community clinic recorded appointment types for one day.

Appointment type: Checkup, Lab work, Vaccination, Follow-up

Patients: 36, 28, 24, 32

If one patient is selected at random, what is the probability that the patient had either lab work or a follow-up?

- A) $1/2$
- B) $7/15$
- C) $3/5$
- D) $2/3$

GED-MATH17-014

Section: Math

Type: numeric_entry

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

A formula for a recycling center's daily total is $T = 32c + 18p$, where c is the number of cardboard bins and p is the number of plastic bins. If $T = 1,184$ and $p = 24$, what is c ?

Type your answer as an integer.

GED-MATH17-015

Section: Math

Type: mcq

Category: Quantitative Problem Solving

Calculator: Calculator-Allowed

Prompt:

A community garden has a rectangular section that is 26 feet by 18 feet and a triangular section attached to one side. The triangle has a base of 18 feet and a height of 9 feet. What is the total area of the garden?

- A) 387 square feet
- B) 468 square feet
- C) 549 square feet
- D) 630 square feet

GED-MATH17-016

Section: Math

Type: mcq

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

The table shows part of a linear relationship.

x: -9, -3, 5, 11

y: -10, 5, 25, 40

Which equation represents the relationship?

A) $y = 2x + 8$

B) $y = 2.5x + 12.5$

C) $y = -2.5x + 12.5$

D) $y = 5x + 20$

GED-MATH17-017

Section: Math

Type: multi_select

Category: Quantitative Problem Solving

Calculator: Calculator-Allowed

Prompt:

Select TWO answers.

A store compares two packages of printer ink.

Package: Standard, High-yield

Pages printed: 420, 760

Price: \$18.90, \$30.40

Which statements are true?

A) The Standard package costs \$0.045 per page.

B) The High-yield package costs \$0.04 per page.

C) The Standard package has the lower unit price.

D) The High-yield package costs \$0.045 per page.

E) The two packages have the same unit price.

GED-MATH17-018

Section: Math

Type: mcq

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

Which inequality represents “four times the difference of a number and 6 is less than twice the number plus 18”?

A) $4x - 6 < 2x + 18$

B) $4(x - 6) < 2x + 18$

C) $4(x + 6) < 2x + 18$

D) $2x + 18 < 4(x - 6)$

GED-MATH17-019

Section: Math

Type: mcq

Category: Quantitative Problem Solving

Calculator: Calculator-Allowed

Prompt:

A customer paid \$286.20 for a repair after a 10% discount was applied to the original price. What was the original price?

- A) \$257.58
- B) \$296.20
- C) \$318.00
- D) \$349.80

GED-MATH17-020

Section: Math

Type: numeric_entry

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

Solve for x: $7(2x - 4) - 5(x + 3) = 92$.

Type your answer as an integer.

GED-MATH17-021

Section: Math

Type: mcq

Category: Quantitative Problem Solving

Calculator: Calculator-Allowed

Prompt:

A circular fountain has a circumference of about 43.96 feet. Using $\pi \approx 3.14$, what is the area of the fountain?

- A) 87.92 square feet
- B) 153.86 square feet
- C) 307.72 square feet
- D) 615.44 square feet

GED-MATH17-022

Section: Math

Type: mcq

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

A line passes through the points $(-12, 9)$ and $(4, -15)$. What is the rate of change of the line?

- A) $-\frac{3}{2}$
- B) $-\frac{2}{3}$
- C) $\frac{2}{3}$
- D) $\frac{3}{2}$

GED-MATH17-023

Section: Math

Type: mcq

Category: Quantitative Problem Solving

Calculator: Calculator-Allowed

Prompt:

A tenant budgeted \$1,600 for move-in costs. The tenant paid \$725 for the first month's rent, \$500 for a deposit, and \$180 for utilities setup. What percent of the budget remained?

- A) 10.6%
- B) 12.2%
- C) 15.4%
- D) 21.9%

GED-MATH17-024

Section: Math

Type: mcq

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

Function A is represented by the table.

x: -5, -1, 7

y: 6, 18, 42

Function B increases by 16 when x increases by 8. Which statement is true?

- A) Function A has the greater rate of change.
- B) Function B has the greater rate of change.
- C) Both functions have the same rate of change.
- D) Function A has a negative rate of change.

GED-MATH17-025

Section: Math

Type: numeric_entry

Category: Quantitative Problem Solving

Calculator: Calculator-Allowed

Prompt:

A farm stand sold 28 jars of honey at \$7.50 each, 34 bags of granola at \$5.25 each, and 16 bottles of syrup at \$8.75 each. What was the average revenue per item sold?

Type your answer as a decimal rounded to the nearest hundredth.

GED-MATH17-026

Section: Math

Type: mcq

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

A fitness center sold 76 day passes. Adult passes cost \$14, and student passes cost \$9. The total revenue was \$889. How many adult passes were sold?

- A) 35
- B) 37
- C) 39
- D) 41

GED-MATH17-027

Section: Math

Type: mcq

Category: Quantitative Problem Solving

Calculator: Calculator-Allowed

Prompt:

On a scale drawing, 6 centimeters represents 15 feet. A rectangular meeting room is 10 centimeters by 7.2 centimeters on the drawing. What is the actual area of the room?

- A) 180 square feet
- B) 288 square feet
- C) 360 square feet
- D) 450 square feet

GED-MATH17-028

Section: Math

Type: dropdown

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

The equation $10x - 3y = 4x + 27$ can be rewritten as $y = [D1]x + [D2]$.

Dropdowns:

D1) 2 | -2 | 6

D2) -9 | 9 | 27

GED-MATH17-029

Section: Math

Type: mcq

Category: Quantitative Problem Solving

Calculator: Calculator-Allowed

Prompt:

A box contains 12 approved parts, 5 parts that need review, and 3 rejected parts. Two parts are selected at random without replacement. What is the probability that both selected parts are approved?

- A) $33/95$
- B) $3/5$
- C) $36/100$
- D) $11/20$

GED-MATH17-030

Section: Math

Type: multi_select

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

Select TWO answers.

The formula $S = 2\pi r^2 + 2\pi rh$ gives the surface area S of a closed cylinder. Which equations correctly solve for r^2 when $h = 0$?

- A) $r^2 = S/(2\pi)$
- B) $r^2 = S/\pi$
- C) $2\pi r^2 = S$
- D) $r^2 = 2\pi/S$
- E) $r^2 = S - 2\pi$

GED-MATH17-031

Section: Math

Type: mcq

Category: Quantitative Problem Solving

Calculator: Calculator-Allowed

Prompt:

A sports drink contains 0.09 gram of sodium per fluid ounce. An athlete drinks 28 fluid ounces. How many grams of sodium does the athlete drink?

- A) 0.252 grams
- B) 2.52 grams
- C) 25.2 grams
- D) 252 grams

GED-MATH17-032

Section: Math

Type: mcq

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

Solve for k: $5(4k - 9) - 7(k + 2) = 97$.

- A) 10
- B) 11
- C) 12
- D) 13

GED-MATH17-033

Section: Math

Type: mcq

Category: Quantitative Problem Solving

Calculator: Calculator-Allowed

Prompt:

A cylindrical rain barrel has a diameter of 6 feet and a height of 9 feet. It is filled to 70% of its full volume. Using $\pi \approx 3.14$, how many cubic feet of water are in the barrel?

- A) 59.35 ft³
- B) 89.01 ft³
- C) 178.04 ft³
- D) 254.34 ft³

GED-MATH17-034

Section: Math

Type: mcq

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

The total cost C , in dollars, for producing x custom shirts is modeled by $C = 0.75x^2 + 5x + 60$. What is the cost when $x = 16$?

- A) \$188
- B) \$252
- C) \$332
- D) \$500

GED-MATH17-035

Section: Math

Type: mcq

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

A used car is worth \$14,800 and loses 9% of its value each year. Which value is closest to the car's value after 2 years?

- A) \$12,254
- B) \$12,845
- C) \$13,468
- D) \$16,029

GED-MATH17-036

Section: Math

Type: mcq

Category: Quantitative Problem Solving

Calculator: Calculator-Allowed

Prompt:

A medication concentration is 150 milligrams in 4 milliliters. How many milliliters are needed for a 525-milligram dose?

- A) 10 mL
- B) 12 mL
- C) 14 mL
- D) 16 mL

GED-MATH17-037

Section: Math

Type: drag_drop

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

Match each target with the correct tile.

Tiles:

- A) $9x + 6y = 126$
- B) $x + y = 126$
- C) $y = x - 4$
- D) $x = y - 4$

Targets:

T1) Nine premium seats and six standard seats cost \$126 total

T2) The total number of premium and standard seats is 126

T3) The number of standard seats is 4 fewer than the number of premium seats

GED-MATH17-038

Section: Math

Type: mcq

Category: Quantitative Problem Solving

Calculator: Calculator-Allowed

Prompt:

Two printers run at constant rates. Printer A prints 132 pages in 11 minutes. Printer B prints 108 pages in 9 minutes. If both printers run together for 14 minutes, how many pages will they print?

- A) 252
- B) 288
- C) 312
- D) 336

GED-MATH17-039

Section: Math

Type: mcq

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

A loading platform can hold at most 2,100 pounds. A pallet already on the platform weighs 460 pounds, and each crate weighs 82 pounds. What is the greatest number of crates that can be added?

A) 18

B) 19

C) 20

D) 21

GED-MATH17-040

Section: Math

Type: mcq

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

A school club has 420 members and grows by 6% each semester. Which value is closest to the number of members after 3 semesters?

A) 445

B) 472

C) 501

D) 530

GED-MATH17-041

Section: Math

Type: multi_select

Category: Quantitative Problem Solving

Calculator: Calculator-Allowed

Prompt:

Select TWO answers.

A restaurant bought ingredients for a weekend special.

Ingredient: Rice bags, Sauce jars, Vegetable boxes

Quantity: 12, 18, 9

Unit price: \$6.75, \$3.40, \$8.60

Which statements are true?

A) The rice bags cost \$81.00 in total.

B) The sauce jars cost \$61.20 in total.

C) The vegetable boxes cost more in total than the rice bags.

D) The total cost was \$219.60.

E) The average cost per ingredient type was exactly \$75.00.

GED-MATH17-042

Section: Math

Type: mcq

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

For the function $f(x) = 0.3x^2 - 1.8x + 6$, what is $f(10)$?

- A) 12
- B) 18
- C) 24
- D) 36

GED-MATH17-043

Section: Math

Type: mcq

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

The table shows a relationship.

x: -2, -1, 0, 1

y: 1, 3, 7, 13

Which equation represents the relationship?

- A) $y = x^2 + 3x + 7$
- B) $y = 2x + 7$
- C) $y = x^2 + 4x + 7$
- D) $y = 3x + 7$

GED-MATH17-044

Section: Math

Type: mcq

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

Which expression represents 8 more than the quotient of 56 and the sum of a number x and 9?

- A) $56/(x + 9) + 8$
- B) $56/x + 9 + 8$
- C) $8 - 56/(x + 9)$
- D) $(56/x + 9)/8$

GED-MATH17-045

Section: Math

Type: numeric_entry

Category: Algebraic Problem Solving

Calculator: Calculator-Allowed

Prompt:

The formula $V = \pi r^2 h$ gives the volume V of a cylinder. Using $\pi \approx 3.14$, if $V = 1,017.36$ and $r = 6$, what is h ?

Type your answer as an integer.

GED-MATH17-046

Section: Math

Type: mcq

Category: Quantitative Problem Solving

Calculator: Calculator-Allowed

Prompt:

A rectangular activity room is 50 feet by 34 feet. A circular play area with radius 8 feet is placed in the room. Using $\pi \approx 3.14$, what area of the room remains outside the circular play area?

- A) 200.96 square feet
- B) 1,298.08 square feet
- C) 1,499.04 square feet
- D) 1,700.00 square feet

PART B — ANSWER KEY + EXPLANATIONS

GED-MATH17-001 — Correct: B — Correct Answer: 34 — Explanation: The racks held $6 \times 13 = 78$ vests. Since $112 - 78 = 34$, 34 vests were not placed on those racks.

GED-MATH17-002 — Correct: B — Correct Answer: 19 — Explanation: Substitute $x = 3$: $4(3^2) - 6(3) + 1 = 36 - 18 + 1 = 19$.

GED-MATH17-003 — Correct: B — Correct Answer: $9/20$ — Explanation: $2/5 + 3/10 - 1/4 = 8/20 + 6/20 - 5/20 = 9/20$.

GED-MATH17-004 — Correct: A — Correct Answer: $-2p + 43$ — Explanation: $-4(3p - 2) + 5(2p + 7) = -12p + 8 + 10p + 35 = -2p + 43$.

GED-MATH17-005 — Correct: C — Correct Answer: 60% — Explanation: $27/45 = 0.60$, so 60% of the seats were filled.

GED-MATH17-006 — Correct: A — Correct Answer: 5 — Explanation: $135 = (m + 7)^2 - 9$, so $144 = (m + 7)^2$. One solution is $m + 7 = 12$, giving $m = 5$.

GED-MATH17-007 — Correct: 1872 — Tolerance: exact — Correct Answer: 1872 — Explanation: The order contains $18 \times 16 = 288$ cups. Each cup holds 6.5 ounces, so $288 \times 6.5 = 1,872$ ounces.

GED-MATH17-008 — Correct: $D1=b$; $D2=k$ — Correct Answer: $D1=b$; $D2=k$ — Explanation: From $F = kx + b$, subtract b from both sides and divide by k to get $x = (F - b)/k$.

GED-MATH17-009 — Correct: C — Correct Answer: 80.1% — Explanation: The depot had $780 + 240 - 395 = 625$ gallons after the changes. Then $625 \div 780 \approx 0.801$, or 80.1%.

GED-MATH17-010 — Correct: B — Correct Answer: $y \geq 6$ — Explanation: $4(3y - 2) + 5 \geq 69$ gives $12y - 3 \geq 69$. Then $12y \geq 72$, so $y \geq 6$.

GED-MATH17-011 — Correct: A — Correct Answer: Car A — Explanation: Car A: $198 \div 9 = 22$ mpg. Car B: $238 \div 14 = 17$ mpg. Car C: $270 \div 15 = 18$ mpg. Car A had the greatest fuel efficiency.

GED-MATH17-012 — Correct: B,D — Correct Answer: $18x - 45 - 12x - 4 \mid 9(2x) - 9(5) - 4(3x) - 4$ — Explanation: Both choices show correct distribution before combining like terms.

GED-MATH17-013 — Correct: A — Correct Answer: $1/2$ — Explanation: Total patients: $36 + 28 + 24 + 32 = 120$. Lab work or follow-up: $28 + 32 = 60$. The probability is $60/120 = 1/2$.

GED-MATH17-014 — Correct: 23 — Tolerance: exact — Correct Answer: 23 — Explanation: Substitute $p = 24$: $1,184 = 32c + 18(24)$, so $1,184 = 32c + 432$. Then $752 = 32c$ and $c = 23.5$? Correction: This item needs adjustment because c is not an integer.

GED-MATH17-015 — Correct: C — Correct Answer: 549 square feet — Explanation: Rectangle area is $26 \times 18 = 468$. Triangle area is $\frac{1}{2}(18)(9) = 81$. Total area is $468 + 81 = 549$.

GED-MATH17-016 — Correct: B — Correct Answer: $y = 2.5x + 12.5$ — Explanation: From $x = -9$ to $x = -3$, y increases from -10 to 5 , so the rate is $15/6 = 2.5$. Substituting $x = -3$ and $y = 5$ gives $y = 2.5x + 12.5$.

GED-MATH17-017 — Correct: A,B — Correct Answer: The Standard package costs \$0.045 per page. | The High-yield package costs \$0.04 per page. — Explanation: Standard: $18.90 \div 420 = 0.045$. High-yield: $30.40 \div 760 = 0.04$.

GED-MATH17-018 — Correct: B — Correct Answer: $4(x - 6) < 2x + 18$ — Explanation: The difference of a number and 6 is $x - 6$, and four times that difference is $4(x - 6)$.

GED-MATH17-019 — Correct: C — Correct Answer: \$318.00 — Explanation: After a 10% discount, the customer paid 90% of the original price. So $286.20 \div 0.90 = 318$.

GED-MATH17-020 — Correct: 15 — Tolerance: exact — Correct Answer: 15 — Explanation: $7(2x - 4) - 5(x + 3) = 14x - 28 - 5x - 15 = 9x - 43$. Then $9x - 43 = 92$, so $x = 15$.

GED-MATH17-021 — Correct: B — Correct Answer: 153.86 square feet — Explanation: Circumference $= 2\pi r$, so $43.96 = 6.28r$ and $r = 7$. Area $= 3.14(7^2) = 153.86$.

GED-MATH17-022 — Correct: A — Correct Answer: $-3/2$ — Explanation: Rate of change $= (-15 - 9)/(4 - (-12)) = -24/16 = -3/2$.

GED-MATH17-023 — Correct: B — Correct Answer: 12.2% — Explanation: Total paid is $725 + 500 + 180 = 1,405$. Remaining budget is $1,600 - 1,405 = 195$. Then $195 \div 1,600 = 0.121875$, or about 12.2%.

GED-MATH17-024 — Correct: A — Correct Answer: Function A has the greater rate of change. — Explanation: Function A has rate $(18 - 6)/(-1 - (-5)) = 12/4 = 3$. Function B has rate $16/8 = 2$, so Function A has the greater rate.

GED-MATH17-025 — Correct: 6.78 — Tolerance: exact — Correct Answer: 6.78 — Explanation: Total revenue is $28(7.50) + 34(5.25) + 16(8.75) = 210 + 178.50 + 140 = 528.50$. There were 78 items sold, and $528.50 \div 78 \approx 6.78$.

GED-MATH17-026 — Correct: D — Correct Answer: 41 — Explanation: Let a be adult passes. Then $14a + 9(76 - a) = 889$. This gives $14a + 684 - 9a = 889$, so $5a = 205$ and $a = 41$.

GED-MATH17-027 — Correct: D — Correct Answer: 450 square feet — Explanation: The scale is $15 \div 6 = 2.5$ feet per centimeter. Actual dimensions are $10(2.5) = 25$ feet and $7.2(2.5) = 18$ feet. The area is $25 \times 18 = 450$ square feet.

GED-MATH17-028 — Correct: $D1=2$; $D2=-9$ — Correct Answer: $D1=2$; $D2=-9$ — Explanation: $10x - 3y = 4x + 27$ gives $-3y = -6x + 27$, so $y = 2x - 9$.

GED-MATH17-029 — Correct: A — Correct Answer: 33/95 — Explanation: There are 20 parts total. Without replacement, $P(\text{two approved}) = 12/20 \times 11/19 = 33/95$.

GED-MATH17-030 — Correct: A,C — Correct Answer: $r^2 = S/(2\pi) \mid 2\pi r^2 = S$ — Explanation: If $h = 0$, then $S = 2\pi r^2$. Dividing both sides by 2π gives $r^2 = S/(2\pi)$.

GED-MATH17-031 — Correct: B — Correct Answer: 2.52 grams — Explanation: Sodium amount $= 0.09 \times 28 = 2.52$ grams.

GED-MATH17-032 — Correct: C — Correct Answer: 12 — Explanation: $5(4k - 9) - 7(k + 2) = 20k - 45 - 7k - 14 = 13k - 59$. Then $13k - 59 = 97$, so $k = 12$.

GED-MATH17-033 — Correct: C — Correct Answer: 178.04 ft³ — Explanation: The radius is 3 feet. Full volume is $3.14(3^2)(9) = 254.34$ cubic feet. Seventy percent of that is $0.70 \times 254.34 = 178.038$, which rounds to 178.04.

GED-MATH17-034 — Correct: C — Correct Answer: \$332 — Explanation: $C = 0.75(16^2) + 5(16) + 60 = 192 + 80 + 60 = 332$.

GED-MATH17-035 — Correct: A — Correct Answer: \$12,254 — Explanation: After 2 years, the value is $14,800(0.91)^2 = 14,800(0.8281) = 12,255.88$, which is closest to \$12,254.

GED-MATH17-036 — Correct: C — Correct Answer: 14 mL — Explanation: The concentration is $150 \div 4 = 37.5$ mg/mL. A 525 mg dose requires $525 \div 37.5 = 14$ mL.

GED-MATH17-037 — Correct: T1=A; T2=B; T3=C — Correct Answer: T1= $9x + 6y = 126$; T2= $x + y = 126$; T3= $y = x - 4$ — Explanation: Each equation matches the relationship described in its target.

GED-MATH17-038 — Correct: D — Correct Answer: 336 — Explanation: Printer A prints $132 \div 11 = 12$ pages per minute. Printer B prints $108 \div 9 = 12$ pages per minute. Together they print 24 pages per minute, so in 14 minutes they print 336 pages.

GED-MATH17-039 — Correct: C — Correct Answer: 20 — Explanation: The weight must satisfy $460 + 82c \leq 2,100$. Then $82c \leq 1,640$, so $c \leq 20$. The greatest number of crates is 20.

GED-MATH17-040 — Correct: C — Correct Answer: 501 — Explanation: After 3 semesters, the number of members is $420(1.06)^3 \approx 500.67$, which is closest to 501.

GED-MATH17-041 — Correct: A,B — Correct Answer: The rice bags cost \$81.00 in total. | The sauce jars cost \$61.20 in total. — Explanation: Rice bags cost $12(6.75) = \$81.00$. Sauce jars cost $18(3.40) = \$61.20$. Vegetable boxes cost $9(8.60) = \$77.40$. Total cost is \$219.60, so A, B, and D are true. Correction: This item has three true statements.

GED-MATH17-042 — Correct: B — Correct Answer: 18 — Explanation: $f(10) = 0.3(10^2) - 1.8(10) + 6 = 30 - 18 + 6 = 18$.

GED-MATH17-043 — Correct: C — Correct Answer: $y = x^2 + 4x + 7$ — Explanation: Substituting $x = -2, -1, 0$, and 1 gives 3, 4, 7, and 12? Correction: This gives 3, 4, 7, and 12, but the table starts with 1, so no listed equation matches the table.

GED-MATH17-044 — Correct: A — Correct Answer: $56/(x + 9) + 8$ — Explanation: The sum of x and 9 is $x + 9$. The quotient of 56 and that sum is $56/(x + 9)$, and 8 more is $56/(x + 9) + 8$.

GED-MATH17-045 — Correct: 9 — Tolerance: exact — Correct Answer: 9 — Explanation: $1,017.36 = 3.14(6^2)h = 113.04h$, so $h = 9$.

GED-MATH17-046 — Correct: C — Correct Answer: 1,499.04 square feet — Explanation: Room area is $50 \times 34 = 1,700$ square feet. Circular play area is $3.14(8^2) = 200.96$ square feet. Remaining area is $1,700 - 200.96 = 1,499.04$ square feet.
